ABSTRACT

This report presents detailed tabulations of statistical data on school enrollment of the civilian noninstitutional population in October 1987 and 1988. The following enrollments are reported: (1) nursery school; (2) kindergarten; (3) elementary school; (4) high school; and (5) college and professional school. The following personal characteristics are described: (1) age; (2) sex; (3) race; (4) Hispanic origin; (5) marital status; (6) family status; (7) family income; (8) education of householder; (9) labor force status; (10) metropolitan residence region; and (11) mother's labor force status and education (for preprimary enrollment). The following characteristics are also reported: (1) level and grade of school; (2) public/private school; (3) full-time attendance status; and (4) two-year/four-year college. New information on vocational school enrollment is shown separately. The following 1988 highlights are reported: (1) 61.1 million persons 3 years old and older are enrolled in regular school; (2) elementary school enrollment grew to 28.2 million; (3) high school enrollment declined to 13.1 million; (4) the high school dropout rate was 4.8 percent; (5) college enrollment totaled 13.1 million students; (6) there were 1.3 million Black college students; (7) among 18- to 24-year olds, 82.3 percent of Whites, 75.1 percent of Blacks, and 55.2 percent of Hispanics were high school graduates, and of those graduates, 38.1 percent, 28.1 percent, and 30.9 percent, respectively, were enrolled in college. Trends in the following areas are reported: (1) preprimary enrollment; (2) elementary and secondary school enrollment; (3) high school dropout rate; and (4) college enrollment. Statistical data are included on 40 tables. Definitions, explanations, sources, and 13 tables of supplementary statistical data are appended. (FMW)

Acknowledgments

This report was prepared in the Education and Social Stratification Branch, under the general direction of **Paul M. Siegel**, Chief. **Brenda R. Jeffries** contributed to table preparation, **D. Darcel Carter** prepared the manuscript, and **Andrea E. Adams** conducted the statistical review of the text. Survey operations and data processing were coordinated by **Kathleen P. Creighton**, **Ronald R. Tucker**, **Gregory D. Weyland**, and **Linda A. Seymour**, and programming of tabulations was performed by **Randy J. Gardner**, Demographic Surveys Division. Sampling review and appendix C were provided by **Lloyd Hicks** and **Caroline A. Riker**, Statistical Methods Division. **Lisa H. Fell** of Education and Social Stratification Branch and **Robert Kominski**, Survey Research Advisor, reviewed the contents of the report. Overall direction was provided by **Arthur J. Norton**, Assistant Chief, Population Division. Data collection was conducted by Bureau of the Census interviewers under the overall direction of **Stanley D. Matchett**, Chief, Field Division.

The staff of the Administrative and Publications Services Division, **Walter C. Odom**, Chief, provided publication planning, design, composition, editorial review, and printing planning and procurement. **Linda H. Ambill** provided publication coordination and editing.

TEXT TABLE

A. Full-time undergraduate enrollment by type of college and age: October 1988 3

DETAILED TABLES

1. Enrollment status of the population 3 years old and over, by age, sex, race, Hispanic origin, and selected educational characteristics: October 1988 5
2. Enrollment status of the population 3 years old and over, by age, metropolitan status, race, Hispanic origin, and selected educational characteristics: October 1988 8
3. Single grade of enrollment and high school graduation status for persons 3 years old and over, by age (single years for 3 to 24 years), sex, race, and Hispanic origin: October 1988 12
4. Preprimary school enrollment of persons 3 to 6 years old, by residence, mother's labor force status and education, family income, race, and Hispanic origin: October 1988 19
5. Level of enrollment below college for persons 3 to 24 years old, by control of school, metropolitan status, sex, race, and Hispanic origin: October 1988 24
6. Enrollment status of primary family members 3 to 17 years old, by family income, level of enrollment, control of school, sex, race, and Hispanic origin: October 1988 25
7. Enrollment status of primary family members 3 to 17 years old, by educational attainment of family householder, level of enrollment, control of school, sex, race, and Hispanic origin: October 1988 28

8. Persons 14 to 24 years old enrolled in secondary school in previous year by current enrollment status, age, sex, race, Hispanic origin, and family income (for dependent family members): October 1988 31
9. College enrollment of the population 14 years old and over, by type of school, attendance status, age, sex, race, and Hispanic origin: October 1988 34
10. Attendance status of college students 14 years old and over, by sex, age, year and type of college, race, and Hispanic origin: October 1988 37
11. Employment status of high school and college students 14 years old and over, by level of school, type of college, attendance status, age, sex, race, and Hispanic origin: October 1988 39
12. Population 14 years old and over enrolled in vocational courses, by employment status, age, sex, race, and Hispanic origin: October 1988 45
13. Level of enrollment of the population 14 years old and over, by type of school, attendance status, age, sex, marital status, race, and Hispanic origin: October 1988 48
14. Enrollment and employment status of recent high school graduates 16 to 24 years old, by type of school, year of school, attainment level for persons not enrolled, sex, race, and Hispanic origin: October 1988 54
15. Enrollment status of primary family members 18 to 24 years old, by family income, level of enrollment, type of school, attendance status, sex, family status, race, and Hispanic origin: October 1988 58
16. Families by full-time college enrollment of dependent members 18 to 24 years old, by family income, race, and Hispanic origin: October 1988 64
17. Enrollment status of dependent family members 18 to 24 years old, by educational attainment of family householder, level of enrollment, attendance status, sex, race, and Hispanic origin: October 1988 65
18. College enrollment this year, by enrollment status last year, attendance status, years of school completed, age, sex, race, and Hispanic origin for high school graduates: October 1988 68
19. Families with children 3 to 17 years old by enrollment status in nursery school to high school, by control of school, family income, metropolitan status, region, type of family, race, and Hispanic origin: October 1988 74
20. Enrollment status of the population 3 years old and over, by age, sex, race, Hispanic origin, and selected educational characteristics: October 1987 78
21. Enrollment status of the population 3 years old and over, by age, metropolitan status, race, Hispanic origin, and selected educational characteristics: October 1987 81
22. Single grade of enrollment and high school graduation status for persons 3 years old and over, by age (single years for 3 to 24 years), sex, race, and Hispanic origin: October 1987 85
23. Preprimary school enrollment of persons 3 to 6 years old, by residence, mother's labor force status and education, family income, race, and Hispanic origin: October 1987 92
24. Level of enrollment below college for persons 3 to 24 years old, by control of school, metropolitan status, sex, race, and Hispanic origin: October 1987 97
25. Enrollment status of primary family members 3 to 17 years old, by family income, level of enrollment, control of school, sex, race, and Hispanic origin: October 1987 98
26. Enrollment status of primary family members 3 to 17 years old, by educational attainment of family householder, level of enrollment, control of school, sex, race, and Hispanic origin: October 1987 101
27. Persons 14 to 24 years old enrolled in secondary school in previous year by current enrollment status, age, sex, race, Hispanic origin, and family income (for dependent family members): October 1987 104

28. College enrollment of the population 14 years old and over, by type of school, attendance status, age, sex, race, and Hispanic origin: October 1987 107
29. Attendance status of college students 14 years old and over, by sex, age, year and type of college, race, and Hispanic origin: October 1987 110
30. Employment status of high school and college students 14 years old and over, by level of school, type of college, attendance status, age, sex, race, and Hispanic origin: October 1987 112
31. Population 14 years old and over enrolled in vocational courses, by employment status, age, sex, race, and Hispanic origin: October 1987 118
32. Level of enrollment of the population 14 years old and over, by type of school, attendance status, age, sex, marital status, race, and Hispanic origin: October 1987 125
33. Enrollment and employment status of recent high school graduates 16 to 24 years old, by type of school, year of school, attainment level for persons not enrolled, sex, race, and Hispanic origin: October 1987 127
34. Enrollment status of primary family members 18 to 24 years old, by family income, level of enrollment, type of school, attendance status, sex, family status, race, and Hispanic origin: October 1987 131
35. Families by full-time college enrollment of dependent members 18 to 24 years old, by family income, race, and Hispanic origin: October 1987 137
36. Enrollment status of dependent family members 18 to 24 years old, by educational attainment of family householder, level of enrollment, attendance status, sex, race, and Hispanic origin: October 1987 138
37. College enrollment this year, by enrollment status last year, attendance status, years of school completed, age, sex, race, and Hispanic origin for high school graduates: October 1987 141
38. Families with children 3 to 17 years old by enrollment status in nursery school to high school, by control of school, family income, metropolitan status, region, type of family, race, and Hispanic origin: October 1987 147
39. Enrollment status of the population 3 years old and over, by age, sex, race, Hispanic origin, and selected educational characteristics: October 1986 151

C-5. Parameters and factors for school enrollment characteristics 201

School Enrollment—Social and Economic Characteristics of Students: October 1988 and 1987

INTRODUCTION

This report presents detailed tabulations of data on school enrollment of the civilian noninstitutional population in October 1987 and 1988. It also includes summary time series of data collected since the beginning of the survey. The data are from the October school enrollment supplement to the Current Population Survey (CPS). Data on school enrollment have been collected annually in the CPS since 1946 and reported in this publication series. The data cover enrollment in "regular school," which includes nursery school, kindergarten, elementary school, high school, and college and professional school and are shown by the following person characteristics: age, sex, race, Hispanic origin, marital status, family status, family income, education of householder, labor force status, metropolitan residence, region, and mother's labor force status and education (for preprimary enrollment). Also, the following enrollment characteristics are shown: level and grade of school, public/private school, full-time attendance status, and 2-year/4-year college. Vocational school enrollment is shown separately.

Revisions in edit and tabulation processing have improved data quality but have made the data for 1987 and 1988 not strictly comparable to data for earlier years. The previous processing procedures were used from 1967 to 1986. Data for 1986 were processed with both the older and the revised procedures. The time series tables in appendix A show two data entries for 1986 as a bridge year, permitting comparisons of results according to each set of processing procedures.

HIGHLIGHTS

(The number in parentheses is equal to 1.6 times the standard error of the estimate. This gives the 90 percent confidence interval when added to and subtracted from the estimate. For a more detailed discussion of sampling error, see appendix C.) Some of the highlights of the data presented in the tables are:

- In 1988, there were 61.1 (± 0.6) million persons 3 years old and over enrolled in regular school—nursery school through college (table 1).
- Elementary school enrollment grew by 1.4 (± 0.2) million from 1985 to 1988 to 28.2 (± 0.1) million, the first growth since elementary school enrollment began to decline in the early 1970's (table A-2).
- High school enrollment continued the decline begun in the late 1970's, to 13.1 (± 0.3) million in 1988 (table A-2).
- The annual high school dropout rate for 1988 was 4.8 (± 0.6) percent (table 8).
- College enrollment totaled 13.1 (± 0.3) million students in 1988, greater than enrollment in any previous year (table A-4).
- In 1988, there were 1.3 (± 0.1) million Black college students 14 years old and over (table A-4).
- Among 18- to 24-year-olds, 82.3 (± 0.7) percent of Whites, 75.1 (± 2.0) percent of Blacks, and 55.2 (± 2.7) percent of persons of Hispanic origin (who can be of any race) were high school graduates; of those graduates, 38.1 (± 1.0), 28.1 (± 2.4), and 30.9 (± 3.4) percent, respectively, were enrolled in college (table A-7).[1]

TRENDS

Preprimary enrollment.[2] About 38.2 percent of children 3 and 4 years old were enrolled in preprimary school in 1988 (85 percent of them in nursery school). In 1970, 20.5 percent of 3 and 4 year olds were enrolled (table A-3). Of children whose mothers were in the labor force in 1988, 41.1 percent were enrolled in school compared with 34.8 percent of those whose mothers were not in the labor force (table 4). Although children with mothers in the labor force were more likely than those whose mothers were not in the labor force to attend nursery school, the difference is not as great as one would expect if the main purpose for nursery school enrollment were provision of child care for working mothers.

Among 3- and 4-year-olds in nursery school, 31.4 percent were attending full day, including 40.7 percent of those whose mothers were in the labor force and 17.0 percent of those whose mothers were not in the labor force. In addition, 69.3 percent of Black students and 26.1 percent of White students attended full day.

[1]College enrollment proportions for Blacks and persons of Hispanic origin were not significantly different.

[2]All comparisons for children by labor force status of mother are for children whose mother is living in the same household.

Nearly all 5-year-olds were enrolled in school (92.6 percent), most in kindergarten. Of all kindergarten students 3 to 6 years old, 38.0 percent attended full day (table 4), including 33.6 percent of Whites and 58.0 percent of Blacks.

Elementary and secondary school enrollment. Elementary school enrollment declined by 21 percent or by about 7.1 million from 1970 to 1984 (table A-2). It has since increased by 1.4 million, to 28.2 million in 1988. Private school enrollment has not followed the same general trend. The long-term trend of declining enrollment in private elementary schools which began in the 1960's has not been reversed.[3] Private elementary school enrollment peaked in the mid 1960's at 4.9 million and 15.5 percent of all students. In 1988, there were 2.8 million students in private elementary schools, only 9.8 percent of all elementary students.

High school enrollment has continued to decline. The larger cohorts, born in the late 1970's, who caused the increase in elementary enrollment, have not yet arrived at high school age. The number of high school students in 1988 was 17 percent below the mid 1970's peak (table A-2). About 7.6 percent of high school students were enrolled in private school in 1988, compared with 11.2 percent in 1965.

High school dropout rate. The annual high school dropout rate for 1988 was 4.8 percent which included 4.7 percent for Whites, 6.3 percent for Blacks,[4] and 10.5 percent for persons of Hispanic origin. The rate for persons of Hispanic origin was significantly higher than that of any other group shown (which were not different from each other) in 1988. Between 1978 and 1988, the dropout rates decreased for all groups except for persons of Hispanic origin. In 1978 the high school dropout rates were 6.8 percent, 6.1 percent, 9.6 percent, and 12.3 percent, respectively.[5] The annual dropout rate for 1988 is calculated as the proportion of 14- to 24-year-olds enrolled in 10th to 12th grades in October 1987 who were no longer enrolled and had not graduated by October 1988 (table 8). See appendix B. The high school dropout population may also be represented by the proportion of an age group (e.g. 18 to 21 years old) not enrolled in school and not high school graduates (table 1).

College enrollment. Total college enrollment was 13.1 million in 1988, an increase of about 400,000 over the 1987 estimate (table A-4). Although the traditional college-age population has been declining throughout the decade, college enrollment has grown since 1980. Enrollment of traditional-age students grew slightly, but most of the growth was among students above traditional college age. In 1980, 34.4 percent of students were 25 years old and over; in 1988, 39.2 percent were in that age group.

The usual prerequisite for college enrollment is high school graduation. Figure 1 shows that the proportion of Black young adults, 18 to 24 years old, who were high school graduates grew substantially (17 percentage points) between 1968 and 1988, which resulted in a much larger group of Black young adults eligible for college in 1988. Black young adults were only slightly less likely than Whites of the same age to be high school graduates in 1988 (75.1 and 82.3 percent, respectively). The proportion of persons of Hispanic origin who were high school graduates remained far below the proportions for the other groups. College enrollment grew for all groups between 1968 and 1988 (table A-7). The proportion of high school graduates enrolled in college grew for the White population, but for Blacks the proportions were not significantly different in 1968 and 1988. Although the number and proportion of Black young adults who were high school graduates rose substantially between 1968 and 1988 (shown in figure 1), the proportion of graduates enrolled in college grew only between 1968 and 1978--there was no statistically significant improvement in college enrollment of Black high school graduates between 1978 and 1988. Among high school graduates in 1988, Whites were more likely than Blacks and persons of Hispanic origin to be enrolled in college (38.1, 28.1, and 30.9 percent respectively).[6]

Two-year colleges (junior and community colleges) enrolled 36.2 percent of undergraduates in 1988, including 35.9 percent of Whites, 39.1 percent of Blacks, and 48.3 percent of persons of Hispanic origin (table 9).[7] Undergraduates attending 4-year colleges were more likely than students in 2-year colleges to attend full time (79.1 percent vs. 49.5 percent). Younger students, less than 25 years old, were more likely than older students to attend 4-year colleges and also more likely to attend full time. See table A.

[3]A significant increase in private school enrollment occurred in 1985, following a significant decrease in 1984. This 1-year divergence from the long-term trend did not appear to affect the trend.

[4]The dropout rates for All Races, Whites, and Blacks were not significantly different.

[5]In the CPS the sample size for persons of Hispanic origin was not of sufficient size to determine a statistically significant difference between years. In 1978, the rates for persons of Hispanic origin and for Blacks were not significantly different. They were different from those for All Races and Whites, which were not different from each other.

The dropout rate for 1978 was calculated from Current Population Report, Series P-20, No. 346, *School Enrollment—Social and Economic Characteristics of Students: October 1978*. The calculation of the dropout rate from tables in reports for 1968 to 1986 is described in CPR, P-20, No. 413, *School Enrollment—Social and Economic Characteristics of Students: October 1983*.

[6]College enrollment proportions for Blacks and persons of Hispanic origin were not significantly different.

[7]Only persons of Hispanic origin were significantly different from the other groups.

Table A. Full-time Undergraduate Enrollment by Type of College and Age: October 1988

(Numbers in thousands)

Age	Under-graduate	2-year college	4-year college
TOTAL ENROLLED			
14 years and over	10,604	3,837	6,768
14 to 24 years	7,474	2,296	5,178
25 years and over	3,131	1,541	1,590
PERCENT FULL TIME			
14 years and over	68.4	49.5	79.1
14 to 24 years	84.0	67.3	91.4
25 years and over	31.1	23.0	39.1

NEW VOCATIONAL COURSE ENROLLMENT DATA

Enrollment in postsecondary school which is not part of the "regular" school system has not generally been presented in this report series. A question was included in the 1987 and 1988 surveys, which asks for all persons not enrolled in elementary or high school: "Excluding regular college courses and on the job training is ... taking any business, vocational, technical, secretarial, trade, or correspondence courses?"

In 1988, 4.5 million persons reported being enrolle in vocational courses, more than half (54.6 percen were women and three-fourths (77.7 percent) were 2 years old and over (table 12). About half (48.9 percen had completed at least 1 year of college and two-third (66.0 percent) were employed full time. Of young adul 14 to 24 years old, the proportions of Blacks and White enrolled in vocational courses was not significant different, 2.5 percent of Whites and 2.8 percent Blacks.

Data on vocational school enrollment in tables 1 and 33 are incorrect (see appendix B).

USER COMMENTS

We are interested in your reaction to the usefulnes of the information presented here and to the content the questions used to provide these results. (There ar facsimiles of the CPS school enrollment supplemen portions of the questionnaire in appendix B). We we come your recommendations for improving our surve work. [1]Controlled to 1980 census based population estimates.
[2]Controlled to 1970 census based population estimates.
[3]Data for 1955 to 1960 are for the population 5 to 34 years old.
[4]Data for 1955 to 1965 are for Black and other races.
[5]Persons of Hispanic origin may be of any race.

Note: 1986 data are shown for the old and new processing system. Improvements in edits and population estimation procedures caused slight changes in the estimates.

Table A-3. Percentage of Persons 3 to 34 Years Old Enrolled in School, by Age, Sex, Race, and Hispanic Origin: October 1955 to 1988

(Civilian noninstitutional population. For meaning of symbols, see text)

[1]Controlled to 1980 census based population estimates.
[2]Controlled to 1970 census based population estimates.
[3]Data for 1955 to 1960 are for the population 5 to 34 years old.
[4]Data for 1955 to 1965 are for Black and other races.
[5]Data are adjusted to include Black only.
[6]Person of Hispanic origin may be of any race.

Note: 1986 data are shown for the old and new processing system. Improvements in edits and population estimation procedures caused slight changes in the estimates.

Table A-4. Age Distribution of College Students 14 Years Old and Over, by Sex, Race, and Hispanic Origin: October 1947 to 1988

(Numbers in thousands. Civilian noninstitutional population. For meaning of symbols, see text)

[1]Controlled to 1980 census based population estimates.
[2]Controlled to 1970 census based population estimates.
[3]Data for 1947 and 1955 to 1970 are for persons 14 to 34 years old.
[4]Data for 1950 are for persons 14 to 29 years old.
[5]Data for 1955 to 1960 are for Black and other races.
[6]Persons of Hispanic origin may be of any race.

Note: 1986 data are shown for the old and new processing system. Improvements in edits and population estimation procedures caused slight changes in the estimates.

Table A-5. College Enrollment of Persons 14 to 34 Years Old, by Sex, Race, and Hispanic Origin: October 1965 to 1988

[1]High school graduates are persons who have completed 4 years of high school or more.
[2]Persons of Hispanic origin may be of any race.

Note: Data for 1980 and all later years use 1980 census-based estimates. Data for 1986 are shown for the old and new processing system. Improvements in edits and population estimation procedures caused slight changes in the estimates.

[1]Controlled to 1980 census-based population estimates.
[2]Controlled to 1970 census-based population estimates.

Note: 1986 data are shown for the old and new processing system. Improvements in edits and population estimation procedures caused slight changes in the estimates. Figures for civilian population and persons enrolled in college for 1965 to 1975 may differ from previous reports because revised civilian figures were used.

Appendix B. Definitions and Explanations

Population coverage. The figures in this report for October 1987 and 1988 are sample survey data and related to the civilian noninstitutional population of the 50 States and the District of Columbia. The estimation procedure used for this survey involves the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race, and Hispanic origin. These independent estimates are based on civilian noninstitutional population counts from the decennial censuses and are updated with statistics on births, deaths, immigration, and emigration and statistics on the strength of the Armed Forces. Data published for 1972 through 1980 were based on independent population estimates derived by updating the 1970 decennial census counts. Starting with the data collected in the October 1981 Current Population Survey (CPS), independent estimates were based on civilian noninstitutional population controls for age, race, and sex established by the 1980 decennial census.

The April 1980 census population count differed somewhat from the independent estimates for April 1980 derived by updating 1970 census population figures. The April 1980 census count of the civilian noninstitutional population was 222,420,441, compared with the 1970 census-based figure of 217,400,244 used for the CPS. Basically, this difference had little impact on summary or proportional measures, such as medians and percent distributions; however, use of the new controls could have had significant effect on the absolute numbers.

School enrollment. The school enrollment statistics from the current survey are based on replies to the interviewer's inquiry whether the person was enrolled in regular school. Interviewers were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year in any type of public, parochial, or other private school in the regular school system. Such schools include nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time, or part-time basis and during the day or night. Regular schooling is that which may advance a person toward an elementary or high school diploma, a college, university, or professional school degree. Children enrolled in nursery schools and kindergarten are included in the enrollment figures for regular schools and are also shown separately.

Enrollment in schools which are not in the regular school system, such as trade schools, business colleges, and schools for the mentally handicapped, which do not advance students to regular school degrees, is not included.

Persons enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and in training courses given directly on the job, are also excluded from the count of those enrolled in school, unless such courses are being counted for credit at a regular school.

Level of school. The statistics on level of school indicate the number of persons enrolled at each of five levels—nursery school, kindergarten, elementary school (1st to 8th grades), high school (9th to 12th grades), and college or professional school. The last group includes graduate students in colleges or universities. Persons enrolled in elementary, middle school, intermediate school or junior high school through the eighth grade are classified as in elementary school. All persons enrolled in 9th through 12th grade are classified as in high school.

Nursery school. A nursery school is defined as a group or class that is organized to provide educational experiences for children during the year or years preceding kindergarten. It includes instruction as an important and integral phase of its program of child care. Private homes in which essentially custodial care is provided are not considered nursery schools. Children attending nursery school are classified as attending during either part of the day or the full day. Part-day attendance refers to those who attend either in the morning or in the afternoon, but not both. Full-day attendance refers to those who attend in both the morning and the afternoon.

Head Start. Children enrolled in Head Start programs or similar programs sponsored by local agencies to provide preschool education to young children are counted under nursery school or kindergarten as appropriate.

Public or private school. In this report, a public school is defined as any educational institution operated by publicly elected or appointed school officials and supported by public funds. Private schools include educational institutions established and operated by religious

bodies, as well as those which are under other private control. In cases where enrollment was in a school or college which was both publicly and privately controlled or supported, enrollment was counted according to whether it was primarily public or private.

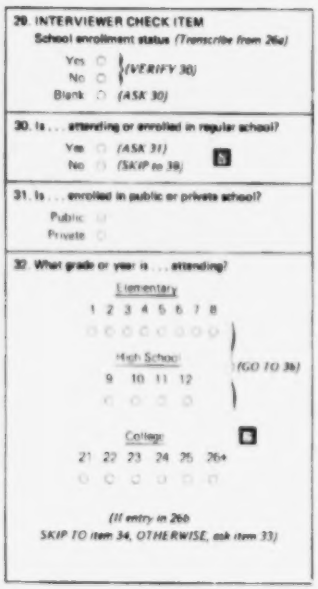
Modal grade. Enrolled persons are classified according to their relative progress in school: that is, whether the grade or year in which they were enrolled was below, at, or above the modal (or typical) grade for persons of their age at the time of the survey. The modal grade is the year of school in which the largest proportion of students of a given age is enrolled.

Annual Dropout Rate. The annual high school dropout rate is the proportion of a group of students who drop out of school in a single year. This is different from a stock (or status) measure such as the proportion of an age group who are high school dropouts (not enrolled in school, not high school graduates, shown in table 1), which does not depend on when they dropped out. A third measure of dropouts is the cohort measure, most commonly from a longitudinal study, in which one calculates the proportion of a specific group of people enrolled in a specific year, who had not received diplomas some years later. For example, the proportion of a cohort enrolled in ninth grade in year X, who had not received a diploma by year X + 4.

Calculation of dropout rate. Annual dropout rates for a single grade may be estimated as the ratio of an esti-

Basic School Enrollment Supplement

(Questions included in the October CPS since 1967)



29. INTERVIEWER CHECK ITEM
School enrollment status (Transcribe from 26a)
Yes ○ (VERIFY 30)
No ○
Blank ○ (ASK 30)

30. Is . . . attending or enrolled in regular school?
Yes ○ (ASK 31)
No ○ (SKIP to 39)

31. Is . . . enrolled in public or private school?
Public ○
Private ○

32. What grade or year is . . . attending?
Elementary
1 2 3 4 5 6 7 8
High School
9 10 11 12
College

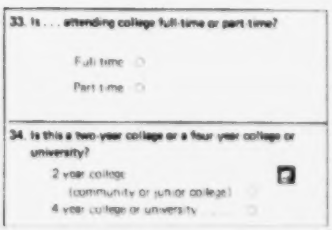
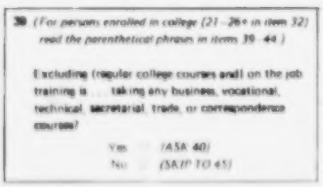
(GO TO 39)

(If entry in 26b
SKIP TO item 34, OTHERWISE, ask item 33)

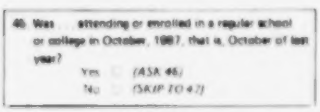


33. Is . . . attending college full-time or part-time?
Full-time ○
Part-time ○

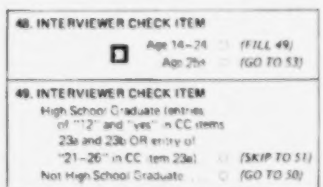
34. Is this a two-year college or a four-year college or university?
2-year college (community or junior college) ○
4-year college or university ○



39. (For persons enrolled in college (21 - 26+ in item 32) read the parenthetical phrases in items 39 - 44.)
Excluding (regular college courses and) on the job training is . . . taking any business, vocational, technical, secretarial, trade, or correspondence courses?
Yes ○ (ASK 40)
No ○ (SKIP TO 45)



40. Was . . . attending or enrolled in a regular school or college in October, 1987, that is, October of last year?
Yes ○ (ASK 46)
No ○ (SKIP TO 47)



48. INTERVIEWER CHECK ITEM
Age 14–24 ○ (FILL 49)
Age 25+ ○ (GO TO 53)

49. INTERVIEWER CHECK ITEM
High School Graduate (entries of "12" and "yes" in CC items 23a and 23b OR entry of "21–26" in CC item 23a) ○ (SKIP TO 51)
Not High School Graduate ○ (GO TO 50)

50. In what calendar year did . . . last attend regular school?
1988 ○
1987 or before ○ (GO TO 52)
Never attended ○

51. In what calendar year did . . . complete high school?
1988 ○
1987 or before ○

mate of the number of persons who dropped out of that grade to an estimate of the number enrolled in that grade at the start of the year preceding the survey, using data presented in this report, as follows:

Persons reported as enrolled last year but not currently enrolled are presented in table 8 by the highest grade completed and are presumed to have dropped out of the grade succeeding that one. Thus, individuals counted as 10th grade dropouts are those not enrolled in school whose highest grade completed is the 9th grade. (They include not only those persons who were enrolled in the 10th grade in the Fall of the year preceding the survey and left school without completing the year, but also those persons who finished the 9th grade in the Spring preceding the survey and were not enrolled at the survey date.) These estimates form the numerators of estimates of the annual grade-specific dropout rate.

Persons currently enrolled in high school are presumed to have successfully completed and been enrolled in the preceding grade in the preceding year. Thus, successful completers of the 10th grade are enrolled in the 11th grade. Along with the persons who dropped out of that grade, they comprise the denominator of the estimate of the annual grade-specific dropout rate.

$$\text{Dropout from grade } n = \frac{\text{Not enrolled and highest grade completed} = n\text{-}1}{\text{Enrolled in grade } n+1 \; + \; \text{Not enrolled and highest grade completed} = n\text{-}1}$$

Since persons who complete the 12th grade cannot be presumed to enroll in college, the estimate of the number of persons enrolled in the 12th grade one year prior to the survey is constructed as the sum of the number of persons reported as having graduated from high school "this year" in table 8 (both those enrolled in the first year of college and persons not currently enrolled whose highest grade completed is the 12th grade) and those persons not currently enrolled who were enrolled last year and whose highest grade completed is the 11th grade (dropouts).

The following chart shows the components of the annual dropout rate calculation for each grade. Age, gender, and race or ethnic groups used are the responsibility of the analyst.

Dropped out of grade	Numerator	Denominator	
	Not currently enrolled and highest grade =	Current grade in which enrolled =	Not currently enrolled and highest grade =
9	8	10	8
10	9	11	9
11	10	12	10
12	11	College 1	11
		+ (not enrolled, completed 12 and graduated this year)	

See CPR Series P-20, No. 413, *School Enrollment—Social and Economic Characteristics of Students: October 1983*, for a discussion of dropout rates and calculation of rates for previous years.

College enrollment. The college enrollment statistics are based on replies to the interviewer's inquiry as to whether the person was attending or enrolled in college. Interviewers were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year, except those who have left for the remainder of the term. Thus, regular college enrollment includes those persons attending a 4-year or 2-year college, university, or professional school (such as medical or law school) in courses that may advance the student toward a recognized college or university degree (e.g., BA or MA). Attendance may be either full time or part time, during the day or night. The college student need not be working toward a degree, but he/she must be enrolled in a class for which credit would be applied toward a degree. (See "school enrollment")

Two-year and four-year colleges. College students were asked to report whether the college in which they were enrolled was a 2-year college (junior or community college) or a 4-year college or university. Students enrolled in the first 4 years were classified by the type of college they reported. Type of college is shown in tables for undergraduates only. Graduate students are shown as a separate group.

Revisions in processing and tabulations have resulted in data for 1987 and 1988 not strictly comparable to data published for earlier years. In tabulations for years prior to 1987, students in the fourth academic year of college were assumed to be in a 4-year college or university regardless of the type of college they reported (74,000 fourth-year students were reported enrolled in 2-year colleges in 1986 on the questionnaire but included in 4-year colleges in the tabulations). Also before 1987, type of college was not allocated for students who did not report (about 250,000 students in the first to third year in 1986). Revised edit and allocation procedures for 1987 and 1988 increased the estimated number of college students, which also increased the numbers of persons reported in 2-year and 4-year colleges. The following table shows data for 1986 using both the revised and old processing and tabulation systems. The differences are due to procedural changes rather than real change:

Undergraduates (X 1000)	Revised	Old	Difference
14 to 34 years old	9,098	8,972	126
2-year college	3,087	2,831	256
4-year college	6,011	5,892	119
Type not reported	000	249	-249

Full-time and part-time attendance. College students were classified, in this report, according to whether they were attending school on a full-time or part-time basis. A student was regarded as attending college full time if he/she was taking 12 or more hours of classes during the average school week, and part time if he/she was taking less than 12 hours of classes during the average school week.

School enrollment in year preceding current survey. An inquiry on enrollment in regular school or college in October of the preceding year was asked for all persons (enrolled and not enrolled). In years before 1988, the question was asked only of persons who were not currently attending regular school or were enrolled in college. In the tabulations of persons enrolled in secondary school in the previous year (tables 8 and 27), persons currently enrolled in high school are assumed to have been enrolled the previous year.

Vocational school enrollment. Vocational school enrollment includes enrollment in business, vocational, technical, secretarial, trade, or correspondence courses which are not counted as regular school enrollment and are not for recreation or adult education classes. Courses counted as college enrollment should not also be included as vocational. (Vocational school enrollment data in tables 14 and 33 are incorrect. The vocational data lines comprise persons enrolled in vocational courses and college, rather than those not enrolled in college, but enrolled in vocational courses.)

Comparability of enrollment data in previous years. Changes in the edit and tabulation packages used in processing the October CPS school enrollment supplement have caused some minor revisions in the estimates. The current edit and tabulation package will be used beginning with 1987 data. The 1986 data which were published in CPR series P-20 No. 429, were reprocessed with the rewritten programs in order to clarify comparability. Tables A-1 to A-5 contain enrollment data in time series. In each table, there are two presentations for 1986. The original was from the edit and tabulation package used for this data series from 1967 to 1986. The revised version (1986R) will be used from 1987 until a new tabulation package is written. Table 39 contains revised data for 1986. Major changes in the data are:

a. Among 14- and 15-year-olds, an edit improvement allowed persons with enrollment data not reported who were previously automatically imputed "not enrolled" to be enrolled.

b. Revisions in tabulation of enrollment in the previous year simplifies calculation of an annual high school dropout rate.

c. Edit improvements caused increases in college enrollment estimates, most notably above age 24; this age group was largely ignored in earlier edits.

d. Type of college is fully allocated (discussed earlier).

e. Tabulations of type of college are available by race.

f. Dependent family member is defined consistently.

g. New data on employment status, vocational course enrollment, college retention and re-entry, and families with children enrolled in public and private school are available.

Age. The age classification is based on the age of the person at his/her last birthday.

Race. The population is divided into three groups on the basis of race—White, Black, and other races. The last category includes American Indians, Japanese, Chinese, other Asian and Pacific Islanders, and any other race except White and Black. In this report, other races is not shown separately.

Hispanic origin. Information on origin or descent was obtained by asking, "What is (this person's) origin or descent?" Responses generally refer to a person's perceived national or ethnic lineage and do not necessarily indicate the country of his/her birth or that of his/her parents.

Persons of Hispanic origin are persons who reported themselves as Mexican American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Hispanic origin. However, all persons who reported themselves as Mexican American, Chicano, Mexican, or Mexicano were combined into the one category—Mexican. Persons of Hispanic origin may be of any race.

Marital status. The marital status category shown in this report, "married, spouse present," includes persons who are currently married and living with their spouse. The category "never married" is self-explanatory. The category "other marital status" includes persons who are separated, divorced, or widowed.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or

a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Family. A family (also referred to in this publication as a primary family) is a group of two persons or more (one of whom is the householder), related by birth, marriage, or adoption and residing together; all such persons are considered members of one family.

Householder. The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded.

Prior to 1980, the husband was always considered the householder in married-couple households. The number of householders is equal to the number of households. Also, the number of family householders is equal to the number of families.

Family householder. The family member who is also the householder (the person or one of the persons who maintain the household), or reference person, is the family householder.

Head versus householder. Beginning with the 1980 census, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" were used. Recent social changes resulted in greater sharing of household responsibilities among the adult members and, therefore, made the term "head" inappropriate in the analysis of household and family data. Specifically, the Bureau reconsidered its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

In this report, the term "householder" is used in the presentation of data that had previously been presented with the designation "head." The householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of other household members is to be recorded.

The practice of using the term "head of family" or "family head", to refer to the person maintaining the household, was discontinued in CPS surveys conducted after the 1980 Census of Population. In surveys taken prior to the 1980 Census of Population, husbands in husband-wife families were always classified as "family heads." Women were only "family heads" if no spouse was present. The person who maintains the household is now called the "family householder."

Dependent family member. In theory, a dependent family member is one who is financially dependent on the householder. In these data, a dependent family member is a primary family member, under 25 years old, who is an own child, brother/sister, or other relative (not parent) of the householder, and is not "married, spouse present."

In analyses of data on college enrollment by family income for earlier years, persons who were primary family members, 18 to 24 years old, and not "married, spouse present" were often treated as dependent family members, although not labelled as such and including some householders (e.g. "other marital status" in table 13 of CPR Series P-20, No. 429.) The family income reported for dependent family members is presumed to be that of the parental family; for others, it is presumed to be that of the individual and his/her spouse. In tables 15 and 34, persons labeled "dependent family member" and "other marital and family status" combined are equivalent to persons labeled "other marital status" in table 13 of CPR Series P-20, No. 429. Persons who are "other marital and family status" in this report are the family householders who are not "married, spouse present."

Years of school completed. Data on years of school completed were derived from the combination of answers to two questions: (1) "What is the highest grade of school he/she has ever attended?" and (2) "Did he/she finish this grade?"

The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public and private (including parochial) elementary and high schools (both junior and senior high), colleges, universities, and professional schools whether day schools or night schools. (See "school enrollment" for definition of "regular" school.) Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

Labor Force Status

In the labor force. The definition of labor force and employment status relates to the population 15 years old and over. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. Data tabulated from the October CPS are for the civilian population only.

Not in the labor force. All civilians who are not classified as employed or unemployed are defined as "not in the labor force."

Employed. Employed persons comprise (1) all civilians who, during the survey week containing October 12, did any work at all as paid employees or in their own business or profession, on their own farm, or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Full-time and part-time employment. Persons who worked 35 hours or more during the survey week and those who worked 1 to 34 hours but usually work full time are classified as employed full time. Part-time workers are persons who worked 1 to 34 hours during the survey week and usually work only 1 to 34 hours. Persons with a job but not at work during the survey week are classified according to whether they usually work full time or part time.

Family income. In this report, family income is derived from a single question asked of the household respondent when a household first enters the sample and is updated on the 1-year anniversary of entry. Income includes money income from jobs; net income from business, farm, or rent; pensions; dividends; interest; social security payments; and any other money income. The income of nonrelatives living in the household is excluded, but the income of all family members 14 years old and over, including those temporarily living away, is included. It should be noted that while characteristics of the person, such as age and marital status, and the composition of families refer to the date of the interview, family income statistics refer to receipts over a 12-month period starting 12 to 16 months prior to the interview.

The income tables include in the lowest income group those who were classified as having no income in the 12-month reference period and those reporting a loss in net income from farm and nonfarm self-employment or in rental income.

The detailed income tables include a separate category ("not reported") for families for which no income information was obtained. In most other CPS's showing income data, the missing income data have been allocated.

The money income level of families shown in this report may be somewhat understated. Income data from the October control card are based on the respondent's estimate of total family money income in broad, fixed income intervals. Income data collected in the March supplement to the CPS are based on responses to 11 direct questions asked about each person 14 years old and over and identifying 23 different sources of income in the preceding calendar year. Previous research has shown that the use of broad income intervals to record money income tends to reduce the rate of nonresponse, while increasing the likelihood that the amounts reported will be significantly understated as compared with results from more detailed questions.

Metropolitan-nonmetropolitan residence. The population residing in metropolitan statistical areas (MSA's) constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term, SMSA, was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to

identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

Comparability of metropolitan estimates. The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the new CPS nonmetropolitan estimates have been lower than the independent estimates. For example, between July 1985 and August 1986, the magnitude of the monthly differences varied from 900,000 to 2.5 million persons, so that the proportion of the population living in metropolitan areas according to the CPS has ranged from 0.4 to 1.0 percentage points higher than the independent estimate. The difference in level between the two sets of estimates is partially attributable to the basic CPS sample design, which, because of sampling variability, includes an oversample of metropolitan households and an undersample of nonmetropolitan households. The monthly variations result from the exit and entrance of rotation groups, each with slightly different metropolitan-nonmetropolitan proportions, into the sample. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Geographic regions. The four major regions of the United States, for which data are presented, represent groups of States, as follows:

Northeast— Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest[1]— Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South— Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West— Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Symbols. The following symbols are used throughout the tables:

-	Represents zero or rounds to zero.
B	The base of the derived figure is less than 75,000.
(X)	Not applicable.
(NA)	Not available.

Rounding of estimates. Individual figures are rounded to the nearest thousand without being adjusted to group totals which are independently rounded. With few exceptions, percentages are based on the rounded absolute numbers.

[1]Formerly North Central.

Appendix C. Source and Accuracy of Estimates

SOURCE OF DATA

Most estimates in this report are based on data obtained in October of 1987 and 1988 in the Current Population Survey (CPS), which is conducted monthly by the Bureau of the Census. This report uses data collected in October of each year in the basic CPS and in the annual school enrollment supplement. Some estimates are based on data obtained from the CPS in earlier years.

Basic CPS. The basic CPS, which is conducted monthly, deals mainly with labor force data for the civilian noninstitutional population. Interviewers ask questions concerning labor force participation for each member 14 years old and over in every sample household.

October Supplement. In addition to the basic CPS questions, in October of each year, interviewers ask supplementary questions about school enrollment for all eligible household members 3 years old and over.

The present CPS sample was selected from the 1980 Decennial Census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to account for new residential construction. It is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions. About 56,100 occupied housing units are eligible for interview every month. Interviewers are unable to obtain interviews at about 2,500 of these units because the occupants are not found at home after repeated calls or are unavailable for some other reason.

Since its introduction, the Bureau of the Census has redesigned the CPS sample several times to improve the quality and reliability of the data and to satisfy changing data needs. The most recent changes were completely implemented in July 1985.

The following table summarizes changes in the CPS designs for the years for which data appear in this report.

Description of the October Current Population Survey

Time period	Number of sample areas	Housing units eligible	
		Interviewed	Not interviewed
1988	729	53,600	2,500
1985 to 1987	729	57,000	2,500
1984	[1]629/729	57,000	2,500
1981 to 1983	629	59,000	2,500
1980	629	65,500	3,000
1978 to 1979	614	55,000	3,000
1972 to 1977	461	46,500	2,500
1971	449	45,000	2,000
1967 to 1970	449	48,000	2,000
1963 to 1966	357	33,500	1,500
1960 to 1962	333	33,500	1,500

[1]The CPS was redesigned following the 1980 Decennial Census of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

Estimation procedure. This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race, and Hispanic/non-Hispanic categories. The independent estimates were based on statistics from decennial censuses of population; statistics on births, deaths, immigration, and emigration; and statistics on the size of the Armed Forces. The independent population estimates used from 1981 to the present were based on updates to controls established by the 1980 Decennial Census. Data for years prior to 1981 were based on independent population estimates from the most recent decennial census. For more details on the change in independent estimates, see the section entitled "Population Coverage" in appendix B.

The estimates in this report for 1985 and later also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population by sex and detailed age groups. Revised weighting procedures incorporate these

new controls. The independent population estimates include some, but not all, undocumented immigrants.

ACCURACY OF THE ESTIMATES

Since the CPS estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of error: sampling and nonsampling. The accuracy of an estimate depends on both types of error, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling variability. Nonsampling errors can be attributed to many sources. These sources include the inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, respondents' inability or unwillingness to provide correct information or to recall information, errors made in data collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage). CPS undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1980 Decennial Census, overall CPS undercoverage is about 7 percent. CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group. Furthermore, the independent population controls have not been adjusted for undercoverage in the 1980 census.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey*, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology*, Bureau of the Census, U.S. Department of Commerce.

Comparability of data. Data obtained from the CPS and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources. Caution should also be used when comparing estimates in this report, which reflect 1980 census-based population controls, with estimates for 1980 and earlier years, which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percentage distributions, but did have a significant impact on levels. For example, use of 1980-based population controls results in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1981 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1985, compare estimates of the Hispanic population over time cautiously.

Note when using small estimates. Summary measures (such as medians and percentage distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. Take care in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Sampling variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors, as calculated by methods described later in "Standard Errors and Their Use," are primarily measures of sampling variability, although they may include some nonsampling error.

Standard errors and their use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. Thus, the tables show levels of magnitude of standard errors rather than the precise standard errors.

The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent (±1.0)," the 90-percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the percentage of 18- to 24-year-old high school graduates in 1988 to that in 1978.

Tests may be performed at various levels of significance, where a significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.6 times the standard error of the difference.

Standard errors of estimated numbers. There are two ways to compute the approximate standard error, s_x, of an estimated number shown in this report. The first uses the formula

$$s_x = fs \qquad (1)$$

where f is a factor from table C-5, and s
error of the estimate obtained by inte
table C-1 or C-2. The second method us
from which the standard errors in Table
were calculated. This formula will provi
rate results than formula (1).

$$s_x = \sqrt{-(b/T)x^2 + bx}$$

Here x is the size of the estimate,
number of persons in a specific age grou
parameter in table C-5 associated with
type of characteristic. If T is not know
White, use 100,000,000; for Black or
10,000,000. When calculating standard
bers from cross-tabulations involving di
teristics, use the factor or set of para
characteristic which will give the largest

Illustration—Table 1 shows that in Octo
were 2,797,000 children 3 and 4 years
school and 7,318,000 children in that ag
formula (1) with f = 1.1 from table C-5 a
thousands) from table C-1, the approxi
error for the number of children 3 an
enrolled in school is

$$(1.1)(65.1) = 71.6$$

The value of s = 65.1 was obta
interpolation in two directions in table
interpolation was between 5,000,000 a
total persons for both 2,000,000 and
mated persons. It yielded the values 61.
estimated persons and 66.0 for 3,000
persons. The second interpolation was
two values which yielded s = 65.1.

Alternatively, using formula (2) with b
table C-5, the approximate standard er

$$s_x = \sqrt{-\frac{3,203}{7,318,000}(2,797,000)^2 + (3,203)(2}$$

So the 90-percent confidence interval
of children age 3 and 4 years old enroll
from 2,679,000 to 2,915,000, i.e., 2,797,00
A conclusion that the average estimate
possible samples lies within a range c
way would be correct for roughly 90
possible samples.

Standard errors of estimated per
reliability of an estimated percentage,
sample data for both numerator and denor
on the size of the percentage and its
percentages are relatively more reliable
sponding estimates of the numerators
ages, particularly if the percentages a

more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table C-5 indicated by the numerator.

The approximate standard error, $s_{x,p}$, of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \qquad (3)$$

In this formula, f is the appropriate factor from table C-5, and s is the standard error of the estimate obtained by interpolation from table C-3 or C-4. Alternatively, formula (4) will provide more accurate results:

$$s_{x,p} = \sqrt{bp(100 - p)/x} \qquad (4)$$

Here x is the total number of persons, families, households, or unrelated individuals in the base of the percentage, p is the percentage ($0 \leq p \leq 100$), and b is the parameter in table C-5 associated with the characteristic in the numerator of the percentage.

Illustration—Table 1 shows that an estimated 27.1 percent of the 2,041,000 Black persons 18 to 21 years old were enrolled in college in 1988. Using formula (3) with f = 1.0 from table C-5 and s = 1.8 from table C-4, the approximate standard error for the percent of Blacks 18 to 21 enrolled in college is

$$(1.0)(1.8) = 1.8$$

Alternatively, using formula (5) with b = 3,086 from table C-5, the approximate standard error is

$$s_{x,p} = \sqrt{\frac{3{,}086}{2{,}041{,}000}(27.1)(100 - 27.1)} = 1.7$$

So, rounded to one decimal place, the 90-percent confidence interval for the estimated percentage of Black persons aged 18 to 21 who were enrolled in college is from 24.4 to 29.8, i.e., 27.1 ± 1.6(1.7).

Standard error of a difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^2} \qquad (5)$$

where s_x and s_y are the standard errors of the estimates, x and y. The estimates can be numbers, percentages, ratios, etc. This will represent the actual standard error quite accurately for the difference between estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration—Table 1 shows that in 1988, 41.9 percent of the 11,720,000 Whites 18 to 21 years old were enrolled in college as compared with 27.1 percent of the 2,041,000 Blacks of the same age group. The apparent difference between the two estimates is 14.8 percent. Using formula (4) and the appropriate b parameters from table C-5, the approximate standard error for the percentage of Whites 18 to 21 years old enrolled in college is s_x = 0.8 and for the percentage of Blacks 18 to 21 enrolled in college is s_y = 1.7. Using formula (5) with these standard errors, the approximate standard error of the difference is

$$s_{x-y} = \sqrt{(0.8)^2 + (1.7)^2} = 1.9$$

This means the 90-percent confidence interval around the difference is from 11.8 to 17.8; i.e., 14.8 ± 1.6(1.9). Because this interval does not contain zero, we can conclude with 90-percent confidence that the percentage of Whites aged 18 to 21 enrolled in college is greater than the corresponding figure for Blacks.

Table C-1. Standard Errors for Estimated Numbers of Persons: Total or White

(Numbers in thousands)

Estimated number of persons	Total persons in age group[1]									
	100	250	500	1,000	2,500	5,000	10,000	25,000	50,000	100,000

c. The standard errors were calculated using formula (4), where b = 3,086 from table C-5.

Table C-5. Parameters and Factors for School Enrollment Characteristics

Characteristic	b parameters[1]	f factors[1]
Persons enrolled in school		
3 to 34 years old:		
Total or White	2,744	1.0
Black	3,086	1.0
Hispanic origin	3,086	1.0
14 to 34 years old:		
Total or White	2,744	1.0
Black	3,086	1.0
Hispanic origin	3,086	1.0
Children enrolled in school		
3 to 13 years old:		
Total or White	3,203	1.1
Black	3,203	1.0
Hispanic origin	3,203	1.0

[1]a. For nonmetropolitan data cross-tabulated with other data, multiply f by 1.2 and the b parameter by 1.5.
b. Multiply the b parameter by 0.84 for CPS data collected from 1982 to 1987, by 0.73 for data collected from 1967 to 1981 and by 1.1 for CPS data collected from 1956 to 1966.
c. For regional data, multiply the b parameter by 0.82 for the Northeast, 0.88 for the Midwest, 0.91 for the South, and 1.34 for the West.
